WEALTH MANAGEMENT

An AI transformation path

01 · Align

Masterclass

Your leadership team in one room: how AI works and where it fails, privacy and governance first, and where AI ROI starts.

from $10,000

02 · Decide

AI ROI Review

Every candidate AI initiative scored for readiness, value, and risk, with stage gates that tie each tranche of funding to evidence.

from $15,000

03 · Build

Advisory Retainer

Design reviews before work starts and standing office hours while your team builds.

from $5,000 a month

Track record

100M+

users on the Apple media knowledge graph whose architecture he led

$40M

saved a year by the Alexa platform he designed

45%

fewer production incidents under the design-review and CI/CD standards he set at Apple

300+

community and business leaders at his Philadelphia Eagles Care Summit keynote

Taught AI strategy to C-suite leaders at HP, Morgan Lewis, PBS, and the Philadelphia Eagles.

First author of A Multi-Layer Framework for Evaluating the Return on Investment of AI Projects (SSRN, 2026).

Wharton Executive MBA, Palmer Scholar (top 5% of class).

The menu

#	Service	Length	From
01	Architecture Call	60 minutes	$500
02	Design Review	1 week	$2,500
03	Advisory Retainer	About 10 hours a month	$5,000 a month
04	Masterclass	2–4 hours	$10,000
05	Keynote	One talk	$10,000
06	Architecture Audit	2–3 weeks	$15,000
07	AI ROI Review	2–3 weeks	$15,000
08	Masterclass Series	Two sessions	$15,000
09	Evals Harness	3–4 weeks	$20,000

Remote by default. On-site sessions add travel.

Getting started

01 · 60 minutes

Architecture Call

from $500

One hour on the design, scaling problem, data model, or AI build your team is stuck on. Bring the doc or the diagram; leave with a recommendation.

02 · 1 week

Design Review

from $2,500

A written review of one design doc before your team commits to building it: data models, service boundaries, failure modes, and scale. Every risk is ranked with a proposed fix, and the week closes with a call to walk your engineers through it.

03 · About 10 hours a month

Advisory Retainer

from $5,000 a month

Standing access for your engineering leaders: design reviews before work starts, office hours for hard distributed-systems and AI problems, and mentoring for senior engineers growing into staff roles.

Teaching and systems

04 · 2–4 hours

Masterclass

from $10,000

One session from the masterclass catalog, fitted to your firm, for executives or engineers.

05 · One talk, plus travel

Keynote

from $10,000

A keynote on any topic in the masterclass catalog, for a conference, summit, or company offsite.

06 · 2–3 weeks

Architecture Audit

from $15,000

A review of a whole system, not one doc: every service boundary, data contract, and dependency, and the bottlenecks, failure loops, and batch jobs that should be streams. Ends with a ranked remediation plan and a working session with your senior engineers.

Deeper engagements

07 · 2–3 weeks

AI ROI Review

from $15,000

Every AI initiative on your list run through the framework from his SSRN paper: a SCALE strategic readiness assessment, a value driver tree tracing each one to return on invested capital, a risk-adjusted discount rate, and stage gates that tie each tranche of funding to evidence. Ends with a decision scorecard for your executives.

08 · Two sessions

Masterclass Series

from $15,000

Two sessions from the masterclass catalog, built as a sequence, like the two-part course he designed and taught at HP.

09 · 3–4 weeks

Evals Harness

from $20,000

A test suite that shows whether a prompt, model, or pipeline change made your AI better or worse: deterministic checks first, a golden set of real queries with expected answers, and model-graded judges where code cannot check. It runs in CI, so no change ships without passing.

Masterclass catalog

HP

AI Foundations for Digital Innovators

How large language models work and where they fail; choosing among ChatGPT, Gemini, Claude, Copilot, Perplexity, and NotebookLM; prompt frameworks; and AI across the software development lifecycle.

HP

Applying AI in IT and Digital Solutions

Retrieval-augmented generation, vector databases, and knowledge graphs; custom GPTs; AI workflows versus agents, and when an agent is worth building; and AI governance.

Morgan Lewis

AI Adoption and Change Management

Why adoption fails, diagnosed with the innovation adoption curve and the MAPPR model, then a live roleplay turning resisters into adopters and a champion’s toolkit for the firm.

PBS

AI Strategy, Governance First

What generative AI is and isn’t; privacy and governance frameworks as the first step; and a path to AI ROI that starts from the pain points taking people away from the mission.

Masterclass catalog

Philadelphia Eagles

AI for Impact

The keynote for more than 300 community and business leaders at the 12th annual Eagles Care Summit.

Atos

Knowledge Graphs, Then Small Language Models

How a knowledge graph enriches questions before they reach a model and checks the answer afterward, then when to go small with language models.

SSRN, 2026

Which AI Projects Will Pay Off?

More than 80 percent of AI projects fail to deliver measurable returns. A four-layer method for deciding which initiatives to fund, validated against eight deployments including Salesforce Agentforce, Spotify, and JPMorgan COiN.

SSRN, 2026

Who Trains the Next Senior?

Managing software engineering when AI makes code cheap: shrink the unit of review, tier scrutiny by consequence, measure verified outcomes, and rebuild the apprenticeship on purpose.

Start with a call.
